Progress Notes

03/24	17:48	<p>-- Continued from previous page -</p> <p>tolerate tube feeding well with minimal residual. maintained up and elevated in bed to minimize potential for aspiration. turned and repositioned for comfort every 2hrs. no respiratory distress noted with pt, continued to receive respiratory treatment as ordered. will continue to monitor pt's status. plan of care continues.</p>
	19:40	<p>Pastoral Care Susan C. Mitchell</p> <p>followup visit with pt and son, whom I had met earlier;son continues to be very anxious about care; he is working thru many personal issues; son and pt both are very observant Jews, and being able to practice is important to them;provided a listening presence, prayer, and pastoral care; encouraged him to call pastoral care prn; Chaplain Susan Mitchell</p>
03/25	07:21	<p>nursing note pat a. chandler, rn Problem: Impaired Gas Exchange Systems assessed unchanged during shift. Turned and positioned for comfort. Son state that this is the first rested night he has had since dad in hospital. Complimented caregiver on "how good he looks. He looks so restfull, his sat is 100%". <small>Corrected</small></p>
		<p>nursing note pat a. chandler, rn Problem: Impaired Gas Exchange Systems assessed unchanged during shift. Turned and positioned for comfort. Blood specimen for am lab collected results pending. Son state that this is the first rested night he has had since dad in hospital. Complimented caregiver on "how good he looks. He looks so restfull, his sat is 100%".</p>
	13:00	<p>Pastoral Care Ellen K. Radday</p> <p>Follow-up visit per night chaplain's request for pastoral support to son. Son very appreciative.</p>
	13:32	<p>Nutrition Progress Note Chitua A. Okoh, RDLN, PHD</p> <p>DIET: Isosource @ 60cc/h Assessment/pxs: 1. TF on hold this pm probably due to scheduled sonogram 2. Elevated liver enzymes noted on 3/24 3. Continues to use O2; possible transfer this pm PLAN: 1. May restart TF post sonogram, goal 60cc/h 2. RD will continue to f/u</p>
	17:05	<p>Respiratory Christina E. Canfield, RN</p> <p>pulse ox desat in the 80s. son by side and very anxious. son touching oxygen equipment and suction equipment. son stated that he had given patient apple juice and ice. resp called and 100% mask applied. suction xl small amount of secretions noted. 15min later pulse ox 94-98%. DRkayixa aware. will continue to monitor. son stated i take the responsibility of this ,my father was finally awake and was hungry. tube feeding held at this time. patient comfortable at this time. will follow plan of care.</p>
	19:50	<p>Respiratory Christina E. Canfield, RN</p> <p>patient restless and taking off mask with son present. o2 mask 4liters attempted but not able to tolerate. 50%venti mask on and abgs done. pulse ox 96-97. hob remains elevated. gtube feeding off at this time. son remains at bedside. no further episodes of son giving patient ice or fluids of any kind. patient remains npo.</p> <p>-- Continued on next page --</p>
